

What Are You Proving? (Proof Statement)

Author: Rida Eman | Date: 2026-09-10

1. The One-Paragraph Proof Statement

The Claim: I build machine learning models that work on real data without leaking future targets.

The Person: A Lead Data Scientist hiring for an engineering team.

The Action: Schedule a technical interview with me.

The Unified Statement:

My portfolio proves I can build honest machine learning pipelines on messy data. It is written for a Lead Data Scientist so they can review my code and invite me to an interview.

2. The Honest 'Why'

Why this needs to exist:

A resume simply lists Python and SQL as skills. This portfolio proves I can actually process 9 million rows of data and build a model that works on unseen clients.
