

# What Are You Proving? (Proof Statement)

**Author:** Rida Eman (CS Senior & ML Intern) | **Track:** AI Fluency (What Are You Proving) | **Date:** 2026-09-09

---

## 1. The One-Paragraph Proof Statement

**The Claim:** I build production-ready machine learning models that extract reliable signals from messy, real-world data while strictly guarding against target leakage.

**The Person:** A Senior ML Engineering Manager or Lead Data Scientist who is exhausted by academic prototypes and needs someone who understands honest holdout splits and robust data pipelines.

**The Action:** I want them to schedule a technical interview to discuss how my end-to-end DuckDB and scikit-learn pipeline could be applied to their business problems.

### The Unified Statement:

My portfolio proves that I can build production-ready machine learning pipelines that extract reliable signals from messy data while strictly guarding against target leakage, aimed directly at a Senior ML Engineering Manager who needs useful, honest prototypes rather than academic demos, so that they feel completely confident scheduling a technical interview with me.

## 2. The Honest 'Why'

### Why this needs to exist:

A standard CV or LinkedIn profile claims that I 'know Python, SQL, and Machine Learning'; this portfolio actually proves it by showing my exact methodology for handling a 9.8M-row DuckDB dataset, enforcing zero-leakage client holdout splits, and deploying a verifiable model.
